

HV FI-SMB 1 m

High-Voltage Cable, Fischer-SMB

Short description

The HV FI-SMB 1 m high-voltage cable is a coaxial cable. The characteristic impedance is 50 Ohm. It is assembled with a Fischer plug S103A023 and a SMB special plug from Langer EMV-Technik GmbH.

The Fischer plug S103A023 can be plugged into generators with Fischer socket D103A023. The high-voltage cable is highly flexible and is therefore particularly suitable for connection to manually guided field sources (Set H3, EFT/burst magnetic field sources).

Technical parameters

| | |
|--------------------|--------|
| Max. Burst-voltage | 4,4 kV |
| Sizes (L x W x H) | 1,20 m |
