

RF-E 05

E-Field Probe 30 MHz up to 3 GHz

Short description

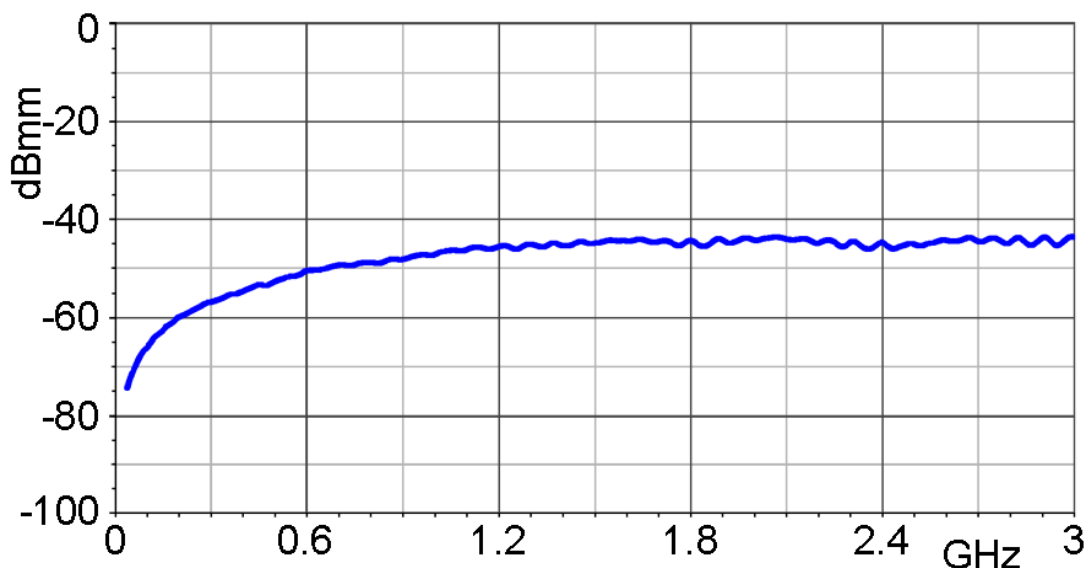

The electrode at the underside of the probe head of the RF-E 05 has a width of approx. 0.5 mm. The E-fields of clocked lines, IC pins, and smaller components are precisely located. The RF-E 05 probe was developed for Langer scanner.

The RF-E 05 is a near-field probe. It has the same structure as the RF-E 02 and RF-E 10 probes, but detects E-fields from very small ranges. The RF-E 05 is designed to detect the specific cause of an electrical interference field. For measurements the E-field probe is positioned directly onto or held above the components or surfaces of printed circuit boards. The near-field probe is small and handy. It has a current attenuating sheath and, therefore, is electrically shielded. It can be connected to a spectrum analyzer or an oscilloscope with a 50 Ω input. The H-field probe does not have an internal terminating resistance of 50 Ω .

Technical parameters

Frequency range	30 MHz ... 3 GHz
Resolution	≈ 0.6 mm
Probe head dimensions:	$\approx (1 \times 8)$ mm
Connector - output	SMB, male, jack

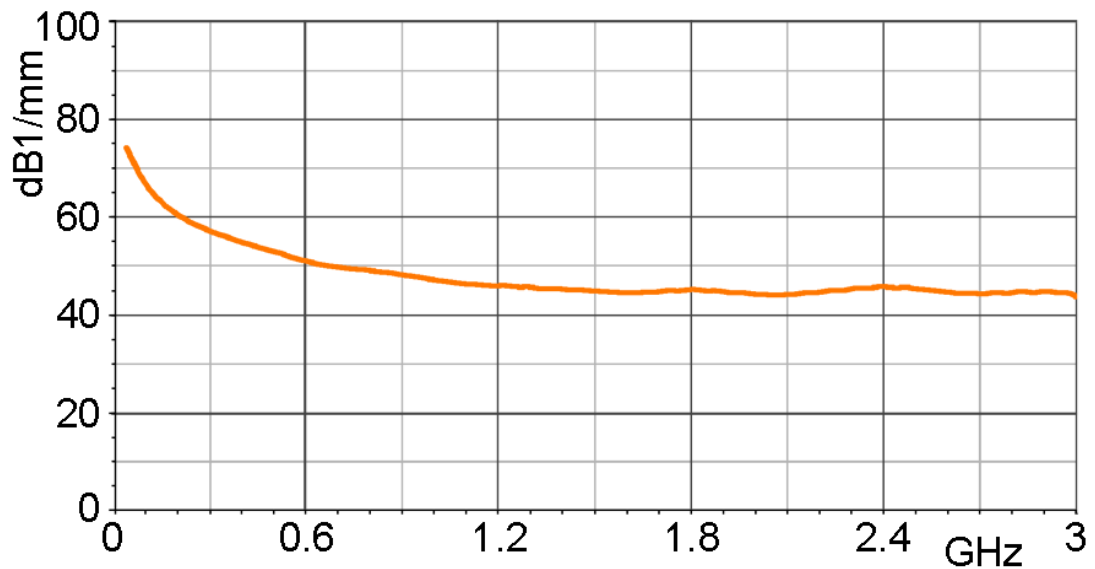

Frequency response [dB μ V] / [dB μ V/mm]

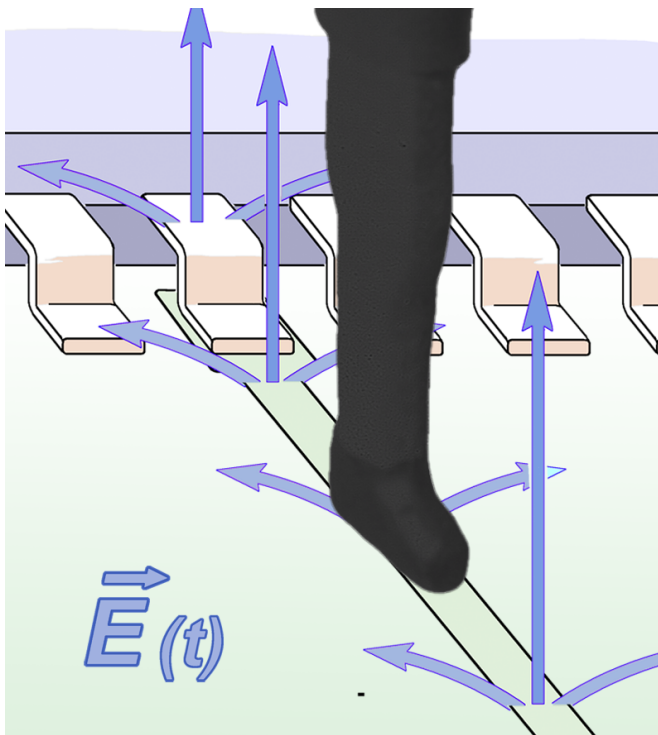

RF-E 05

E-Field Probe 30 MHz up to 3 GHz

E- field correction curve [dB μ V/mm] / [dB μ V]
