

Short description

The engineers of the Langer EMV-Technik GmbH analyze together with you your assembly and detect weak points or interference sources with the help of the measuring technique of the Langer EMV-Technik GmbH. They locate weak points or sources of interference right at the circuit and layout and find sensitive conductor tracks or inputs, for example.

Langer EMV-Technik GmbH is the right contact if your development sample does not pass the conformity test. Then we proceed analytically and quickly find the cause. The EMC engineers at Langer EMV-Technik GmbH modify the module and test its effectiveness.

It is optimal if the EMC knowledge of Langer EMV-Technik GmbH is incorporated into your first development sample during the development process of your module. You save development time thanks to ideal starting conditions.

The consulting can be carried out either on your own premises or on the premises of Langer EMV-Technik GmbH.
