

PA 203 BNC set

Preamplifier 100 kHz up to 3 GHz

Short description

The PA 203 BNC preamplifier is designed for the amplification of measuring signals, e.g. weak signals of near-field probes with high resolution. The PA 203 is connected to the 50 ohm input of a spectrum analyzer or an oscilloscope and is supplied by the wall-plug transformer. With the correct cable a near-field probe can be connected to the input of the preamplifier.

A 50 ohm BNC is used for the input and the output of PA 203 BNC.
