

Short description

The ICEM TEM measurement service determines the electromagnetic radiation of an IC in the frequency range from 150 kHz to 1 GHz in accordance with the IEC 61967-2 standard. The test IC is mounted on an IC measurement adapter printed circuit board (PCB), which is fixed in a suitable opening of the TEM cell (transverse electromagnetic cell). The IC measurement adapter PCB thus becomes part of the cell wall and the test IC is located inside the TEM cell.
