

RFS-R 50

Scanner Probe 30 MHz up to 3 GHz

Short description

The RFS-R 50 H-field probe is designed for taking field measurements on assemblies, devices or cables at a distance of up to approx. 3 cm. The H-field probe can be used to identify larger components as sources of interference.

The RFS-R 50 is a passive near-field probe. It has a sheath current attenuation and is electrically shielded. It can be connected to a spectrum analyzer or an oscilloscope with a 50 Ω input. It does not have an internal terminating resistance.

Technical parameters

Frequency range	30 MHz ... 3 GHz
Probe head dimensions	\varnothing 10 mm
Connector - output	SMA, male, plug
Length	\approx 55 mm

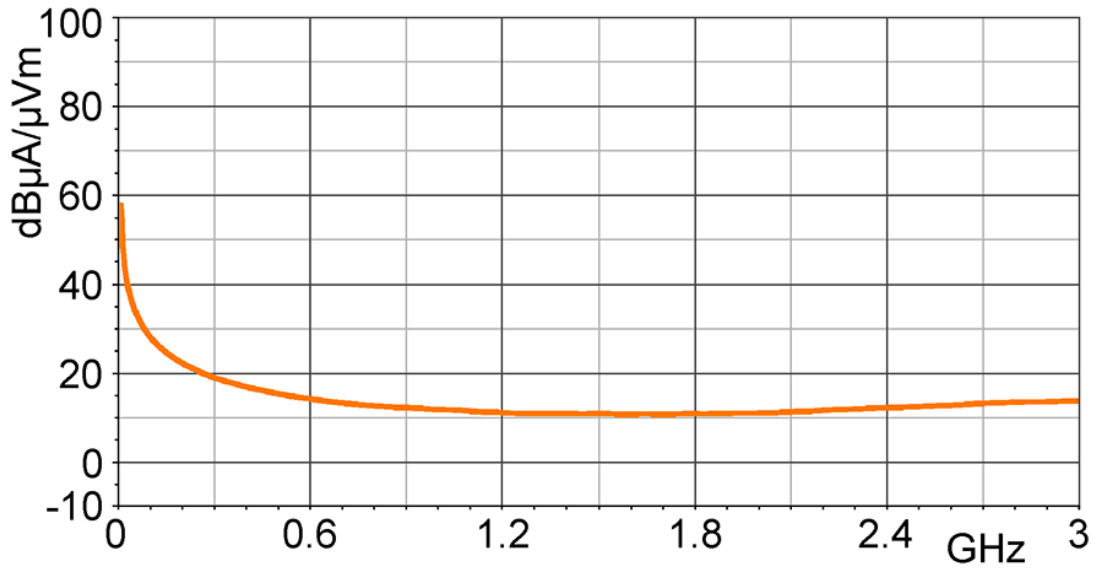

Frequency response

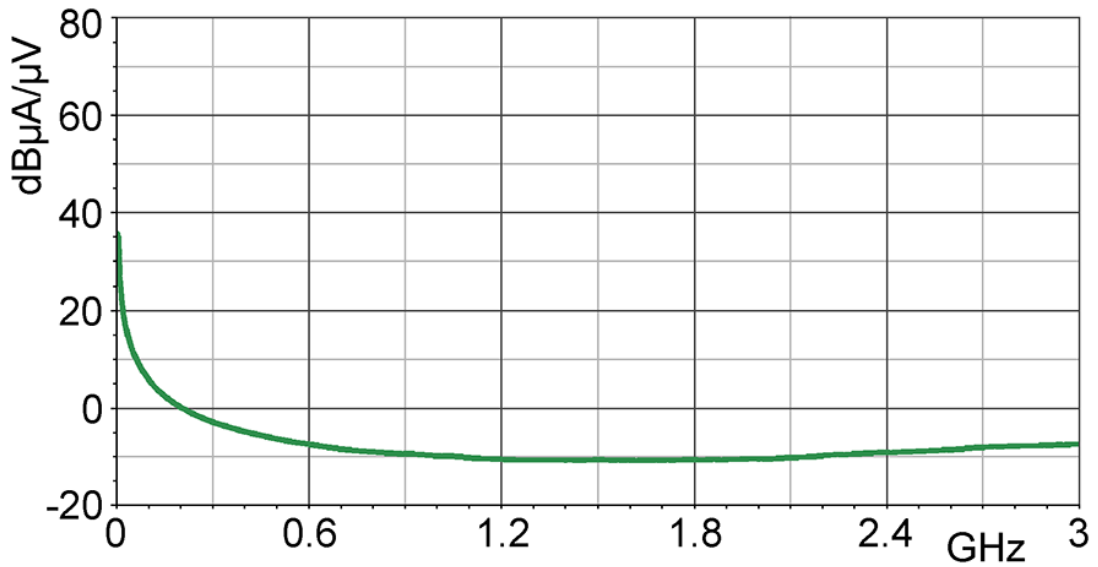

RFS-R 50

Scanner Probe 30 MHz up to 3 GHz

H-field correction curve [dB μ A/m] / [dB μ V]

Current correction curve [dB μ A] / [dB μ V]
