

Langer EMV-Technik GmbH is a German company that researches, develops, produces and further develops in the field of electromagnetic compatibility (EMC).

Our development-accompanying EMC measurement technology for emission and immunity as well as the IC test system are in demand worldwide.

To strengthen our team, we are looking for one now

Hardware developer / electronics engineer (m/f)

Your Tasks:

- Conception, development and implementation of electronic devices in the area of high-frequency measurement technology and electromagnetic compatibility
- Development and design of RF circuit technology, analogue technology, digital technology, FBGA, opto-systems, electro-mechanical systems and test automats
- Lecturing the Langer EMV-Technik seminars for emission and immunity interference
- EMC consulting nationally and internationally

Your Profile:

- University degree in electronics/ electrical engineering or computer science (preferably Diplom or Master)
- Reliability, team- and quality-oriented approach to work
- Proficiency in spoken and written German and English

We offer:

- A highly motivated team
- A flexible work environment with varied tasks
- Flat hierarchies
- Non-temporary employment contract

Please send your application and salary expectations by E-Mail to Mrs. Irrmisch: irrmisch@langer-emv.de.
